Eduroam on Windows 7

1. Click on the network symbol (Computer screen and network cable) and click **Open Network and Sharing Centre**.

![Open Network and Sharing Centre](image)

2. Click **Manage Wireless Network** to the left of the screen.

![Manage Wireless Network](image)
3. Select **Add** to the left of the screen.

4. Select **Manually add a network profile**.
5. Type in eduroam in the text field for **Network name**. Select **WPA2-Enterprise/WPA2** in the scrollable list for **Security type**. Select **AES** in the scrollable list for **Encryption type**. Then click **Next**.

6. Click **Change Connection Settings**.
7. Click the **Security tab**. In the scrollable menu for Select Method for Network Authentication, **Microsoft:Protected EAP (PEAP)** should be selected. Click on **Settings** to the right of the scrollable menu.
8. Fill in the missing server in the text field **Connect to the these servers:** and type `radius.lu.se`.

The **DigiCert Assured ID Root CA** are to be ticked. Click **Configure**...

10. Click on this box to get the window where you are to type in your LUCAT identity.

11. Type in your StiL identity with @lu.se at the end.
NB! It is not your email address that you are required to type in.
Click **OK**; you will now be connected to eduroam.
