Programme overview
Photonics is the science and technology of generating, controlling and detecting light. Photonics is of increasing importance to our society, as illustrated by the 2009 and 2014 Nobel Prize in Physics. Optical communication, which relies on optical fibres combined with several other photonics devices, forms the backbone of today’s information technology. Light-emitting diodes provide bright and energy-efficient white lamps for tomorrow’s lighting and lasers are today important tools in virtually any field of research and technology. Our programme provides in-depth understanding of optics and laser technology, practical experience of optical design, practical experience in an optics and laser laboratory and in-depth knowledge of some of the main photonics applications (e.g. communication or biophotonics).

This education programme is coupled to world-leading research activities in optics, lasers and their applications, performed at the Lund Laser Centre. NanoLund, with an active research area in applied photonics, is another research centre connected to the programme.

Programme modules/courses
For information on specialisations and elective courses, please see www.fysik.lu.se/english/education/start-studying/masters-programme

Career prospects
Employment opportunities exist in many areas. Applications of photonics include light detection, telecommunications, information processing, illumination, metrology, spectroscopy, medicine, laser material processing, robotics and defence. The photonics industry is in rapid expansion worldwide. In addition, two international research facilities create opportunities for photonics engineers in Lund – MAX IV, a synchrotron radiation laboratory that opened in Lund in June 2016, and ESS, the European Spallation Source that is currently under construction.

Entry requirements and how to apply
ENTRY REQUIREMENTS
A Bachelor’s degree of at least 180 credits in physics or the equivalent. The degree must include at least 90 credits in physics, or 60 credits in physics and 30 credits in relevant engineering subjects or the equivalent.

English Level 6 (equivalent to IELTS 6.5, TOEFL 90). See www.lunduniversity.lu.se for details.

HOW TO APPLY
1. Apply online: Go to www.lunduniversity.lu.se/physics-photonics. Click on “Apply” and follow the instructions for the online application at the Swedish national application website www.universityadmissions.se. Rank the chosen programmes in order of preference.

2. Submit your supporting documents:
   - **General supporting documents:** Check what documents you need to submit (i.e. official transcripts, degree diploma/proof of expected graduation, translations, proof of English, passport) and how you need to submit them at www.universityadmissions.se.
   - **Programme-specific supporting documents:** When applying for this programme, you must also submit a ‘Summary Sheet’ with your application. See the programme webpage for details.

3. Pay the application fee (when applicable).
SELECTION CRITERIA/ADDITIONAL INFORMATION
The selection will be based on grades awarded for previous academic courses, particularly qualifying courses, and the statement of purpose (from the applicant’s ‘Summary Sheet’).

TUITION FEES
There are no tuition fees for EU/EEA citizens. For non-EU/EEA citizens, the tuition fee for this programme is SEK 145 000 per year. See www.lunduniversity.lu.se for details on tuition fees.

About the Department of Physics
The Department of Physics has over 300 researchers, teachers, technicians and administrators. We work to extend the understanding of physics and its applications, and to communicate our findings, and those of others, to new generations. We also teach the basics of physics to over one thousand students every year.

About Lund University
Lund University was founded in 1666 and is repeatedly ranked among the world’s top 100 universities. The University has 40,000 students and 7,400 staff based in Lund, Helsingborg and Malmö. We are united in our efforts to understand, explain and improve our world and the human condition.

Lund is the most popular study location in Sweden. Lund University offers one of the broadest ranges of programmes and courses in Scandinavia, based on cross-disciplinary and cutting-edge research. The University has a distinct international profile, with partner universities in over 70 countries.

Lund University has an annual turnover of SEK 8 billion, two-thirds of which are destined for research. Our eight faculties conduct strong research in many different areas, including over thirty research fields in which we are world-leading. Many scientific breakthroughs and pioneering innovations have originated from Lund University.

The world-leading research facilities MAX IV and ESS which are being established in Lund will be of great significance for research and industrial development within materials and life sciences. MAX IV, which was inaugurated in 2016, is the world’s foremost synchrotron radiation facility and the ESS will be the most powerful neutron source in the world once it opens for research in 2023. Science Village Scandinavia is developing nearby, destined to become a meeting place and a test environment for research, education and entrepreneurship.
